PROJECT DESIGN PHASE-II

Technology Stack (Architecture & Stack)

| Date | 14 October 2022 | |
|---------------|-----------------------------------|--|
| Team ID | PNT2022TMID11418 | |
| Project Name | Real Time Communication System | |
| | Powered by AI for Specially Abled | |
| Maximum marks | Marks | |

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table 1 & table 2.

Example: Specially Abled person convey their message to others

TABLE-1: COMPONENTS & TECHNOLOGIES

| S.No | Component | Description | Technology |
|------|-------------------|--|--|
| 1. | User | Communication barriers of deaf or hearing impaired people with other communities, contributing significantly to their social inclusion | AI technology |
| 2. | Flash UI | Flash's user interface components let you interact with the users that use your site and gather information. | Using the cloud it can be executed |
| 3. | Models | Support Vector Machine (SVM) is subsequently applied to classify our gesture image dataset. | Machine Learning |
| 4. | Image Prediction | Gesture can be completely observable and viewing a gesture from another perspective makes the prediction. | ANN, CNN |
| 5. | Image | Image processing is used to make the image into signs by the neural network | ANN, CNN, Open CV |
| 6. | Speech | Speech translates the voice into image and sensitive neural play. | AI and machine learning methods like deep learning and neural networks |
| 7. | Evaluate date | Aims to estimate the generalization accuracy of a model on future (unseen/out-of-sample) data. | |
| 8. | Unstructured data | P unstructured data is a conglomeration of many varied types of data that are stored in their native formats | Natural Language Processing (NLP) |
| 9. | Structured data | Typically categorized as quantitative data — is highly organized and easily decipherable by machine learning algorithms | Machine language and artificial intelligence tools |
| 10. | Neural network | The same convolutional neural network architecture was used for both, the top view and the bottom view models, the only difference is the number of output units | AI technology |
| 11. | Dataset | First prototype of this system is was used a dataset of 24 static signs from the Panamanian Manual Alphabet. | AI technology |

TABLE-2: Application Characteristics

| S.No | Characteristics | Description | Technology |
|------|--------------------------|------------------------|---------------------|
| 1. | Open-Source Frameworks | Robots and other | Artificial |
| | | tools provide home- | Intelligence like |
| | | based care and other | robots and software |
| | | assistance, allowing | systems |
| | | people with | |
| | | disabilities to live | |
| | | independently | |
| 2. | Security Implementations | Set the inclusion and | Artificial |
| | | exclusion criteria, | Intelligence |
| | | Report the results in | |
| | | the survey | |
| 3. | Scalable Architecture | The improvement in | Artificial |
| | | the specially abled | Intelligence |
| | | persons interaction | |
| | | with the | |
| | | environments | |
| 4. | Availability | Technology | Artificial |
| | | solutions that mimic | Intelligence |
| | | humans and use | |
| | | logic from playing | |
| | | chess to solving | |
| | | equations and | |
| | | Machine learning is | |
| | | one of the | |
| | | technologies | |
| 5. | Performance | Enables people with | Artificial |
| | | disabilities to step | Intelligence |
| | | into a world where | |
| | | their difficulties are | |
| | | understood and | |
| | | taken into account | |
